*In The Black Cashier* was designed with the input of specialty store retailers to make transaction processing faster and easier than ever before.

When it comes to usability, we've covered all the bases.

#### Streamline POS processes

Our POS operator menus can be customized by store and location. Design special screen layouts for checkout and customer service counters. Multi-level operator security provides secure management of cashier operations including voids, returns and pricing adjustments. Process sales for remote store delivery with our charge send feature. On-line transaction capture to H.O. allows for returns from any location.

Back Office functions such as inventory taking, receiving and transfers can be handled without leaving the sales floor. Look up

products and check on inventory availability both locally or chain wide through POS search windows.

#### Increase Sales and Build Customer Loyalty

Look up your customers and view their purchase history. Make customer specific notes and add important data such as e-mail addresses. You can add new customers, track their preferences, purchases and manage loyalty points all from the POS.

#### Integrated Debit, Credit and Gift Card Processing

In the Black Retail Suite supports payment processing from a variety of banks. Minimize entry errors, speed up reconciliation and enjoy the benefits of fast, easy, cost effective card management. Signature capture devices are supported and multiple digitized customer signatures are stored with each transaction for immediate recall.
